A woman with brown hair tied back, wearing a light-colored button-down shirt and dark trousers, is smiling as she uses a green power drill to assemble a dark grey metal frame on a kitchen countertop. The frame consists of several rectangular panels connected by vertical supports. In the background, there are kitchen cabinets and a countertop with some bottles.

Discover ELEMENT cargo

ELEMENT cargo is a new system for base cabinets, designed with self-assembly in mind. All components come in one compact package. All you need is a power drill and a few moments of work to enjoy convenient everyday use for years to come!

Easy and convenient installation

It's simple – scan the QR code to watch the installation video and get started! The well-thought-out product design and clear video instructions make installation quick, smooth and intuitive. In just a few moments, unused space can be transformed into a practical storage area.

Built to last

Once installed, ELEMENT Cargo becomes part of everyday life. Smooth operation, convenient access to the contents and a durable construction ensure lasting comfort for years to come. In the kitchen, bathroom or anywhere else you need it.

It all comes together!

Design and quality

Modern design

Full-height, solid sides increase storage safety and prevent products from falling out when the cargo is pulled out, while also giving the system a **modern, minimalist look**.

Robust construction and versatility

ELEMENT Cargo is made of durable **1.2 mm thick sheet steel**, ensuring high rigidity of the entire structure. A wide range of variants makes it easy to match **ELEMENT Cargo** to different base cabinet widths. The system is available in 150, 200, 250, 300 and 400 mm versions and in two timeless colours – **white and graphite** – allowing it to fit seamlessly into any kitchen design.

Solid bottom – convenience and hygiene

The solid bottom of each cargo level prevents dirt and small items from falling into the cabinet interior. **Removable, double-sided shelves** made of 6 mm thick moisture-resistant HDF board make it easier to keep clean. In addition, each shelf is fitted with an **anti-slip mat** that helps prevent stored products from shifting when the system is pulled out. This practical solution improves everyday convenience and helps keep the cabinet interior organised.

Everyday *comfort*

Full extension

provides convenient access to the entire contents of the cargo, including items stored at the back.

The soft-close mechanism

ensures quiet and smooth closing of the front panel, enhancing everyday comfort.

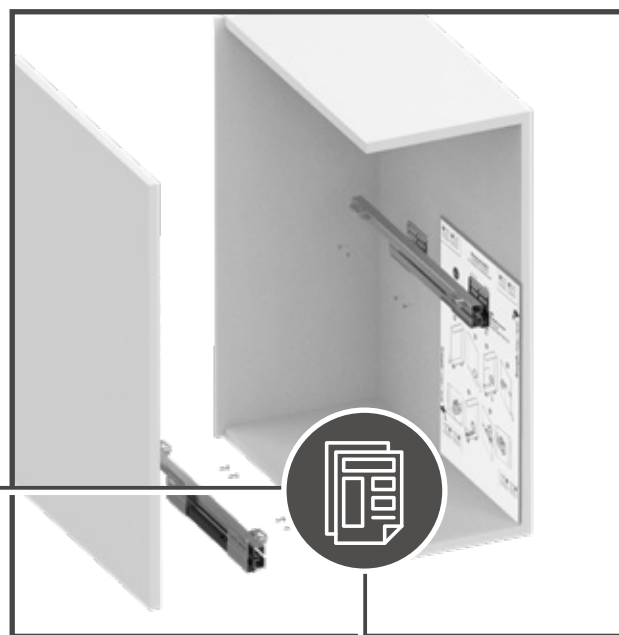

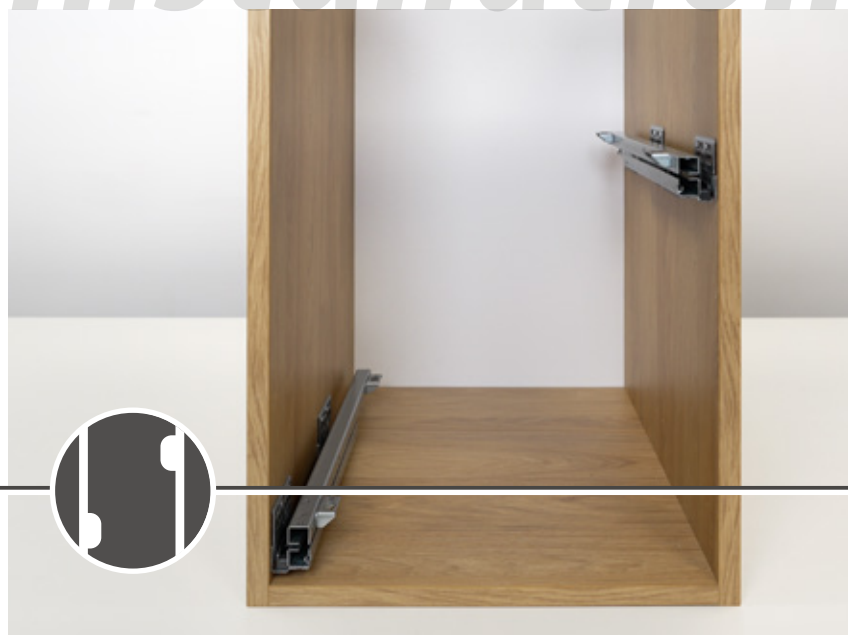

The anti-slip mat

helps prevent stored products from shifting during operation of the system.

Installation

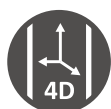

Diagonally mounted slides

increase structural rigidity and ensure stable operation of the system, even under full load.

The included installation templates

make it significantly easier to position and mount the slides to the cabinet body and to attach the front panel.

4D front adjustment

allows precise alignment of the front panel during installation and enables later fine-tuning.

QR codes

placed on the packaging, in the instructions and in marketing materials provide access to an intuitive video installation guide.

Durability

The robust steel construction and high-quality slides make **ELEMENT** Cargo perfectly suited to everyday use. **The maximum load capacity of the entire system is 20 kg**, so it can easily accommodate heavier items such as bottles, jars or food supplies. **The well-thought-out design** ensures even load distribution and **stable operation**, even **when fully loaded**. It is a solution designed for **intensive use**, maintaining its **functionality and reliability for years**.

A lifetime warranty on the slides
confirms their long-lasting durability and reliability.

ELEMENT Cargo is an excellent choice wherever **convenient organisation and quick access** to stored products are **important**. Thanks to its **modern design and moisture resistance**, the system can be successfully used not only in the kitchen, but also in the **bathroom, laundry room or utility room**.

Regardless of where it is installed, **ELEMENT Cargo** helps make better **use of available space and keep everything organised** every day.

Versatility

Packaging

and logistics

ELEMENT Cargo is supplied in compact, flat packaging measuring **100 x 530 x 400 mm**, making **storage, transport and distribution** easier. As a result, the product takes up less space during warehousing. The complete system – including the frame, baskets, slides and mounting components – is packed in a single package, streamlining transport, storage and order preparation.

The compact packaging dimensions also allow convenient shipping via **parcel lockers** – the box fits into a size C compartment. The robust packaging construction means it is **ready for shipping as-is** and does not require any additional protection with an outer carton. Space has also been provided on the packaging for a **shipping label**, as well as **markings and warnings intended for the courier**.

	PACKAGING DIMENSIONS (mm) height x width x depth	WEIGHT	number of units per pallet
 ELEMENT Cargo mini 150	100 x 530 x 400	5,90 kg	48
 ELEMENT Cargo mini 200		6,70 kg	
 ELEMENT Cargo mini 250		7,20 kg	
 ELEMENT Cargo mini 300		7,50 kg	
 ELEMENT Cargo mini 400		8,20 kg
